

ELDER SMITH ROAD

The project involves the construction of a 1.3km road between the Mawson Interchange and Main North Road. It also includes the construction of a 4 way signalised intersection at the junction of Main North Road and Maxwell road. Due to the road running through a vernal pool catchment, stringent environmental monitoring and sediment runoff controls were maintained throughout the project.

Key features include:

- The construction of 1.3km of roadway
- The installation of all relevant road infrastructure including lighting, traffic signals, bollards and guard rails
- Thorough environmental considerations and monitoring

The project was successfully completed on time and within budget

Client:

Department of
Transport Energy &
Infrastructure

Project Value:

\$11.3 Million

Project Program:

Commenced

January 2007

Completed

August 2007
