

MOUNT OSMOND INTERCHANGE

An interchange on the South Eastern Expressway including a 43m single span tensioned concrete bridge, earthworks and pavements associated with road works, bus bays and carparking, 2.5kms of underground drainage and extensive landscaping.

Bardavcol was the Prime Contractor undertaking all earthworks, pavements, concrete work and project and construction management. Subcontractors were utilised for post tensioning, drainage work, landscaping and bitumen sealing.

Key features include:

- The bridge was built in 2 halves to minimise disruption to traffic on this major highway
- Close liaison and coordination with separate contractor required
- There were no lost time injuries recorded
- There were no lost time industrial disputes

The project was completed on time.

The project is the final structure across the new Adelaide – Crafers highway and Transport SA was very satisfied with the project in providing a gateway approach to Adelaide.
